2. Physical Introduction

Hardware Description

- RP-SMA Connector
- Reset Button
- LAN1 (Passive PoE)
- LAN2
- Grounding Terminal
- LEDs

3. Hardware Installation

Step 1:
1. Remove the bottom cover.
2. Connect one end of the Ethernet cable into the LAN (Passive PoE) port of the device and the other end to the PoE port on the PoE Injector.
3. Connect the power cord with the PoE Injector and plug the other end into an electrical outlet.
4. Connect the second Ethernet cable into the LAN port of the PoE Injector and the other end to the Ethernet port on the computer.

Step 2: Place the bottom cover back into the device and attach the antennas onto the antenna connectors of the device to finish the installation.

Step 3: Pole Mounting
1. Thread the open end of the mounting ring through the tab on the pole mounting bracket on the back of the device.
2. Lock and tighten the mounting ring to secure the mounting bracket to the pole to finish the installation.

IMPORTANT SAFETY PRECAUTIONS:
1. LIVES MAY BE AT RISK! Please be aware of the electrical wires around. Carefully read the section "OUTDOOR INSTALLATION WARNING" in the manual before installation.
2. Users MUST complete grounding wired with the device; otherwise, a sudden lightning could cause fatal damage to the device. EMD (Lightning) DAMAGE IS NOT COVERED UNDER WARRANTY.
3. Users MUST use the "PoE Injector and Power Cord" shipped in the box with the device. Use of other options will cause damage to the device.

4. Web Login

A computer with wired Ethernet connection is required for the first-time login and memorize it.

Default 5GHz SSID: PLANET_1-5GHz
Default 2.4GHz SSID: PLANET_1-2.4GHz
Default Password: admin
Default User Name: admin
Default IP Address: 192.168.1.253

Step 1:
1. Click the "Change Adapter Settings" button located in the lower-left corner of your computer.
2. Click "Properties" of the device (192.168.1.254).
3. Double-click the "Internet Protocol Version 4 (TCP/IPv4)"
4. Click the "Use the following IP address" and enter the default IP address 192.168.1.253.
5. Click "OK".
6. On the right click the "Local Area Connection" and then click the "Properties".
7. Select "Internet Protocol Version 4 (TCP/IPv4)" and then click the "Use the following IP address" and click "OK".
8. In the "Properties" of your device address, click "OK".

Step 2:
1. Click the "Local Area Connection"
2. Click the "Properties".
3. Double-click the "Properties" of "Internet Protocol Version 4 (TCP/IPv4)"
4. Click the "Use the following IP address" and then enter the IP address 192.168.1.253.
5. Click the "OK".
6. Go to the "Network and Sharing Center" change the "Internet Protocol Version 4 (TCP/IPv4)" and click "Properties".
7. Select "Use the following IP address" and enter the IP address 192.168.1.254.
8. Click the "Start" button located in the lower-left corner of your computer.

Step 3:
1. Click the "Properties" of the device (192.168.1.253).
2. Click the "Internet Protocol Version 4 (TCP/IPv4)" and then click the "Use the following IP address" and then enter the IP address 192.168.1.253.
3. Click the "Start" button located in the lower-left corner of your computer.

Further Information:
- For security reasons, it is recommended to change the password at the first login and memorize it.
- The Web management allows you to access and manage the device easily. Launch the Web browser and enter the default IP address 192.168.1.253.
- The above steps introduce the simple installations and configurations of the device. For further configurations, please refer to the user manual, which can be downloaded from the website.
- If you have further questions, please contact the local dealer or distributor where you purchased this product.

2011-E10690-000

pe1=4&model=48986&type=3
Step 1: The Web management allows you to access and manage the device easily. Launch the Web browser and enter the default IP address "http://192.168.1.253".

Step 2: When the login window appears, please enter the User Name and Password. The default User Name and Password are both "admin". Then click the Login button to continue.

For security reasons, it is recommended to change the password at the first login and memorize it.

Step 3: After you enter into the Web User Interface, click Wireless on the left hand side of the screen to configure the wireless connection. Once the basic configuration of the device is done, go to the Changes page to save and apply the changes.

4. Web Login

A computer with wired Ethernet connection is required for the first-time configuration of the device.

1. Click the "Start" button located in the lower-left corner of your computer.
2. Click "Control Panel".
3. Double-click the "Network and Sharing Center" icon.
4. Click "Change Adapter Settings".
5. Double-click "Local Area Connection".
7. Select "Use the following IP address" and then click the "OK" button twice to save the configuration. For example, you may choose from 192.168.1.1 to 192.168.1.254 excluding the default IP address of the device (192.168.1.253).

Further Information:

The above steps introduce the simple installations and configurations of the device. For further configurations, please refer to the user manual, which can be downloaded from the website.

WDAP-702AC:

If you have further questions, please contact the local dealer or distributor where you purchased this product.

Step 4: Wall Mounting
(1) Mark the locations on the surface for the two mounting holes. Use the appropriate drill bit to drill two holes with a diameter of 8.1mm and depth of 26mm.
(2) Hammer the anchors into the holes until they are aligned to the wall.
(3) Screw the screws into the anchors.
(4) Place the device against the wall with the mounting screw heads to finish the installation.

See the diagram for wall mounting instructions.
